Interim Financial Statements Q3 2026

Main features at quarter end:

- Strong loan growth in the retail market
- Lower net interest income
- Increased operating expenses

The KLP Banken Group finances mortgages and other credits to retail customers as well as loans to municipalities, county municipalities and companies that perform public tasks. Additionally, the KLP Banken manages a lending portfolio on behalf of its parent company KLP (Kommunal Landspensjonskasse). The Group manages a lending total of NOK 143 (132)[1] billion. Lending activities are nationwide and are divided into the business segments retail market and public-sector market.

In the retail market, the bank offers products and services on competitive terms in order to help ensure that organisations which have chosen KLP as their pension provider are perceived as attractive employers.

KLP Kommunekreditt AS, together with KLP, aims to be an attractive provider of long-term financing to the municipal sector. By offering favourable lending terms and maintaining a significant presence in the market, the company aims to help keep interest rates for the municipal sector low.

KLP Banken AS is wholly owned by KLP. KLP Banken AS has two wholly owned credit institutions, KLP Kommunekreditt AS and KLP Boligkreditt AS. The head office is in Trondheim.

Income statement

The KLP Banken Group's profit before tax for the third quarter amounted to NOK 153.4 (268.5) million. Operating profit before tax for the third quarter alone was NOK 34.9 million (84.4) million. The decline in earnings was primarily driven by lower net interest income in both business areas and higher operating expenses.

Profit before tax by business area amounted to NOK 124.5 (202.4) million in the Retail Market and NOK 28.9 (66.1) million in the Public Sector Market. After tax and changes in estimates, the Group's total comprehensive income at the end of the third quarter was NOK 185.8 (269.1) million.

Net interest income for the KLP Banken Group amounted to NOK 294.4 (403.4) million at the end of the third quarter. The decline was primarily attributable to lower margins between lending and funding in both business areas. Strong lending growth has resulted in an increased need for market funding. On average, this has resulted in higher funding costs year to date.

At the end of the quarter, the income statement included net gains on financial instruments of NOK 31.0 (10.2) million. This effect on the result was primarily related to changes in the market value of the Bank's liquidity investments and the repurchase of the Group's own funding issues. The change compared with the previous year was mainly attributable to an increase in the market value of the Bank's liquidity investments.

Net fee and commission income amounted to NOK 31.2 (26.9) million by the end of the third quarter.

The banking group manages residential mortgages and public-sector loans financed by the parent company (KLP). Management fees for this assignment amounted to NOK 47.9 (46.9) million at the end of the quarter.

Operating expenses and depreciation and amortisation year to date amounted to NOK -250.2 (-219.5) million. Most of the increase compared with the previous year was attributable to price increases for purchased external services and higher personnel expenses. Operating expenses also included reimbursements to customers as a result of fraud amounting to NOK -1.6 (-0.8) million.

Credit losses and loss allowances year to date amounted to NOK -1.0 (0.7) million in the Retail Market. A positive amount in this line item is primarily attributable to reversals of historical loss allowances exceeding new losses. KLP Banken has not observed any material increase in losses or loss allowances related to residential mortgages and credit cards compared with the previous year. No losses related to public-sector lending have been recognised so far in 2026.

Lending and credits

KLP Banken manages loans recognised on its own balance sheet as well as loans financed by KLP, totalling NOK 143 (132) billion. As at 30 September 2026, the KLP Banken Group had loans to customers of NOK 53.9 (45.6) billion on its own balance sheet. The amounts attributable to the Retail Market and public-sector lending were NOK 33.4 (25.0) billion and NOK 20.5 (20.6) billion, respectively.

Outstanding residential mortgage loans increased by NOK 4.2 (0.7) billion year to date. New residential mortgage loan disbursements amounted to NOK 10.2 (6.5) billion year to date. The Bank's main target group for residential mortgages comprises members of KLP's pension schemes.

Residential mortgages totalling NOK 6.4 (2.8) billion have been sold by KLP Banken to the mortgage credit institution KLP Boligkreditt year to date. The volume of residential mortgage loans managed on behalf of KLP has remained relatively stable and amounted to NOK 3.0 billion at the end of the quarter.

KLP Banken's lending volume in the Public Sector Market has changed by NOK -2.0 (1.9) billion since the beginning of the year. During the same period, loans to public-sector borrowers managed on behalf of KLP increased by NOK 2.4 (0.3) billion. New loan disbursements to public-sector borrowers year to date amounted to NOK 9.3 (8.0) billion for KLP and KLP Banken combined.

[1] Figures in parenthesis refer to the corresponding period last year.

Liquidity investments

Surplus liquidity is placed with other banks and invested in interest-bearing securities. The KLP Banken Group's deposits with credit institutions amounted to NOK 1.4 (1.8) billion at the end of the quarter. The carrying amount of interest-bearing securities measured at fair value was NOK 8.8 (5.9) billion.

Changes in the market value of interest-bearing securities had a positive effect on the result of NOK 40.5 (16.0) million at the end of the third quarter.

Funding

The KLP Banken Group's external funding consists of deposits and bonds. At the reporting date, deposits from retail and corporate customers amounted to NOK 17.6 (16.9) billion. Deposit growth year to date was NOK 0.8 (0.8) billion.

Debt securities issued amounted to NOK 42.7 (32.8) billion at the end of the quarter. Of the outstanding debt securities, covered bonds (OMF) issued by KLP Kommunekreditt AS amounted to NOK 23.5 (19.7) billion, while covered bonds issued by KLP Boligkreditt AS amounted to NOK 17.1 (12.1) billion. All covered bond issues have achieved an Aaa rating. Debt securities issued by KLP Banken AS amounted to NOK 2.1 (1.0) billion.

The effect on the result of realised and unrealised changes in value arising from the repurchase of the Group's own bond issues amounted to NOK -8.8 (-7.2) million at the end of the third quarter.

Risk management and capital adequacy

The KLP Banken Group is exposed to various types of risk and has established a risk management framework to ensure that risks are identified, analysed, and managed through policies, limits, procedures, and guidelines.

The bank is to have a conservative risk profile, and earnings are primarily to be derived from deposit-taking and lending activities as well as liquidity management. This implies low market risk, and that interest rate risk arising from lending and deposit activities is reduced using derivatives.

The KLP Banken Group and its subsidiaries are required to maintain sound long-term funding in accordance with regulatory requirements, and frameworks have been established to ensure that this objective is met.

Credit risk in the bank is low, and lending is mainly limited to loans with municipal risk and loans secured by real estate. The bank's liquidity is managed through placements in other banks and in securities that meet specified credit quality requirements in line with board-approved credit limits.

Core capital in accordance with capital adequacy rules at the end of the third quarter of 2026 amounted to NOK 3,601 (3,344) million. Core capital consists solely of Common Equity Tier 1 capital. Loans are risk-weighted in accordance with the capital requirements regulations. The KLP Banken Group's total capital ratio and CET1 ratio were 23.2 (25.8) per cent at the reporting date. The applicable regulatory capital requirements, including buffer requirements, are 15.3 per cent for the CET1 ratio and 19.2 per cent for the total capital ratio. The leverage ratio was 5.5 (6.1) per cent. The requirement here is 3.0 per cent.

Outlook

The KLP Banken Group's target group in the retail segment consists of KLP members, including employees of KLP's owner customers and pensioners. This represents a substantial share of the population and provides a strong foundation for further strengthening the Group's position in the retail banking market. The KLP Banken Group will continue its ambition to develop attractive and relevant products and services for its members.

In 2025, KLP Banken AS entered into an agreement with the Norwegian Nurses Organization (NSF) to provide banking services to NSF's 130,000 members. The agreement, which entered into effect on 1 January 2026, provides a basis for expecting continued strong mortgage growth, as a share of NSF members are anticipated to refinance their mortgages with KLP Banken. To support further growth, KLP Banken AS has strengthened its organization through increased staffing, the engagement of external consultants, and system enhancements.

A significant proportion of the KLP Banken Group's residential mortgages is funded through its subsidiary KLP Boligkreditt AS. The company issues covered bonds, helping to keep the banking group's overall funding costs low and thereby playing an important role in financing mortgages for KLP members. At the end of the second quarter, the company reported a negative operating result due to the substantial need for new market funding, resulting from strong lending growth. The Board expects the company to generate positive operating results over time.

Compared with other customer groups, the KLP Banken Group's retail customer base is relatively well protected from employment-related risk, as many customers are employed by municipalities and healthcare enterprises. The Group therefore expects the level of defaults and credit losses to remain limited in the future. The Bank also maintains ambitious growth targets for deposits, which are primarily expected to be achieved through attracting additional customers within its target group.

Household debt levels are subject to strict regulatory lending requirements through Norway's residential mortgage lending regulations. The KLP Banken Group views this framework as a sound basis for the continued development of retail banking products and services. The Group will continue to apply conservative credit-granting practices in line with regulatory requirements to maintain low risk in its lending portfolios, while also supporting customers facing financial difficulties by helping them identify appropriate solutions.

The banking industry remains at the forefront of technological development, while customer expectations for simple and digital solutions continue to increase. The KLP Banken Group aims to leverage proven technology to offer relevant, customer-friendly and efficient services. This entails an ongoing need for IT investments to support the Bank's objectives of continued growth and profitability. Against this background, among other considerations, KLP Banken decided in 2025 to join the Eika Banking Alliance. Technical migration is expected to take place during the first half of 2027.

Norwegian municipalities have developed a strong and comprehensive range of public services. Increasing life expectancy, demographic trends, income growth and climate-related risks indicate that public sector investment levels are likely to remain significant in the years ahead. In its annual budget survey, the Norwegian Association of Local and Regional Authorities (KS) indicated that investment activity and the volume of new borrowing in 2026 are expected to remain at approximately the same level as in the previous year. Demand for loans financing projects related to climate adaptation is also expected to continue growing in the years ahead.

KLP Kommunekreditt AS is Norway's only credit institution issuing covered bonds backed by loans to the public sector. The presence of KLP Kommunekreditt AS, together with KLP, in the public sector lending market promotes competition and thereby helps ensure stable access to long-term financing for the public sector on favorable terms. In connection with the 2026 national budget, the Norwegian Parliament requested that the Government assess whether loans to municipalities should carry the same risk weight as

loans to the central government (0% risk weight). To date, the Government has not acted on this request.

KLP Banken AS has a strong capital position and equity that meets all regulatory requirements. Combined with low credit risk in its lending activities, this provides a solid basis for achieving access to the best possible funding terms in the capital markets. This is an important prerequisite for offering favourable lending terms.

The KLP Banken Group is well positioned for further development and growth.

Notes to the financial statement

KLP BANKEN GROUP

Note 1 General information

KLP Banken AS was formed 25 February 2009. KLP Banken AS owns all the shares in KLP Kommunekreditt

AS and KLP Boligkreditt AS. These companies together form the KLP Banken Group. KLP Banken Group offers loans to Norwegian municipalities and county authorities, as well as to companies with public sector guarantee. The lending activities are principally financed by issuance of covered bonds. In addition, The Group, offers standard banking products to private customers. KLP Banken AS is registered and domiciled in Norway. Its head office is at Beddingen 8 in Trondheim. The company has a branch office in Dronning Eufemiasgate 10, Oslo.

The company, KLP Banken AS, is a wholly owned subsidiary of Kommunal Landspensjonskasse (KLP). KLP is a mutual insurance company.

Note 2 Accounting principles

The interim report includes the interim Financial Statements of KLP Banken Group for the period 01.01.2026-30.09.2026. The interim Financial Statements has not been audited.

The financial statements have been prepared in accordance with IFRS Accounting Standards®) as adopted by the EU with some additions that follow The Norwegian Accounting Act and the Regulations concerning annual accounts for banks, mortgage firms and finance companies (the Accounting Regulations). The interim financial statements have been prepared in accordance with IAS 34 "Interim Financial Reporting".

Other accounting principles and calculations are the same in the interim financial statement as in the annual report for 2025, please see the annual report for further information.

CHANGES IN IFRS® ACCOUNTING STANDARDS

A new accounting standard on presentation and disclosure in financial statements, IFRS 18 Presentation and Disclosure in Financial Statements, issued by the IASB in April 2024, will be effective for annual reporting periods beginning on or after 1 January 2027. The new standard will replace IAS 1 Presentation of Financial Statements. It introduces new requirements for the presentation and disclosure of information in financial statements. It also introduces limited amendments to other standards, including IAS 7 Statement of Cash Flows. The objective is to improve the information provided in financial statements and enhance comparability between companies.

In the statement of profit or loss, income and expenses are classified into five categories: operating, investing, financing, income taxes and discontinued operations. New requirements are also introduced for the subtotals operating profit and profit before financing and income taxes. For KLP Kommunekreditt, IFRS 18 will, among other things, require assessments of the classification of income and expenses related to lending, financing and investing activities.

Note 5 Fair value hierarchy

Fair value shall be a representative price based on what a corresponding asset or liability could have been traded for on the balance sheet date. A financial instrument is considered to be listed in an active market if the listed price is simply and regularly available from a stock market, dealer, broker, industry grouping, price setting service or regulatory authority, and these prices represent actual and regularly occurring transactions at arm's length. If the market for the security is not active, or the security is not listed on a stock market or similar, valuation techniques are used to set fair value. These are based for example on information on recently completed transactions carried out on business terms and conditions, reference to trading in similar instruments and pricing using externally collected yield curves and yield spread curves. As far as possible the estimates are based on externally observable market data and to the least extent possible on company-specific information.
The different financial instruments are thus priced in the following way:

Fixed-income securities - government

Nordic Bond Pricing is used as a source for pricing Norwegian government bonds.

Fixed-income securities - other than government

Norwegian fixed-income securities are generally priced based on rates from Nordic Bond Pricing. Securities not covered by Nordic Bond Pricing are priced theoretically. The theoretical price should be based on the discounted value of the security's future cash flows. Discounting is done using a swap curve adjusted for credit spread and liquidity spread. The credit spread should, to the extent possible, be based on a comparable bond from the same issuer. Liquidity spread is determined at the discretion of the evaluator.

Financial derivatives

These transactions are valued based on the applicable swap curve at the time of valuation. Derivative contracts are to be used only to hedge balance amounts and to enable payments obligations to be met. Derivative contracts may be struck only with counterparties with high credit quality.

Shares (unlisted)

For liquid shares and units, the closing price on the balance sheet date is used as the basis for measurement at fair value. If the prices are not quoted, the last price traded is used. Illiquid shares are priced on the basis of the Oslo Stock Exchange's index algorithm based on the last traded prices. If the pricing information is outdated, a derived valuation is produced from relevant stock indices or other similar securities. If this is also considered unsatisfactory, a discretionary valuation is made. This may be based on fundamental analysis, broker assessment, or adjustments for risk or liquidity considerations in relation to the price.

Fair value of loans to retail customers

The fair value through profit/loss is calculated by discounting contractual cash flows to present values. The discount rate is determined as the market rate, including a suitable risk margin. For loans measured at fair value through other comprehensive income, the fair value is calculated as the recognised principal minus estimated loss provisions on loans classified in Stage 2 and 3 (see note 12 Loan losses provision).

Fair value of loans to Norwegian local administrations

The fair value of these loans is considered to be virtually the same as the book value, as the contract terms are constantly adjusted in line with market interest rates. The fair value of fixed rate loans is calculated by discounting contractual cash flows by market interest rates including a suitable risk margin at the end of the reporting period. This is measured at Level 2 in accordance with the fair value hierarchy.

Fair value of deposits

The fair value of floating rate deposits is taken to be approximately equal to the deposit amount including accrued interest. The fair value of fixed rate deposits is calculated by discounting contractual cash flows by market interest rates including a suitable risk margin. Discounting contractual cash flows by market interest rates including a suitable risk margin. This is measured at Level 2 in accordance with the fair value hierarchy.

Fair value of loans to and receivables from credit institutions

All receivables from credit institutions (bank deposits) are at variable interest rates. The fair value of these is considered to be virtually the same as the book value, as the contract terms are continuously changed in step with change in market interest rates. This is measured at Level 2 in accordance with the fair value hierarchy.

Liabilities created on issuance of securities

Fair value in this category is determined on the basis of internal valuation models based on external observable data. This is measured at Level 2 in accordance with the fair value hierarchy.

LEVEL 1: Instruments at this level obtain fair value from listed prices in an active market for identical assets or liabilities to which the entity has access at the reporting date. Examples of instruments in Level 1 are stock market listed securities.

LEVEL 2: Instruments at this level obtain fair value from observable market data. This includes prices based on identical instruments, but where the instrument does not maintain a high enough trading frequency and is therefore not considered to be traded in an active market, as well as prices based on corresponding assets and price-leading indicators that can be confirmed from market information. Example instruments at Level 2 are fixed-income securities priced on the basis of interest rate paths.

LEVEL 3: Instruments at Level 3 contain non-observable market data or are traded in markets considered to be inactive. The price is based generally on discrete calculations where the actual fair value may deviate if the instrument were to be traded. Financial assets measured at amortised cost and hedge accounting comprise lending to and due to credit institutions, Norwegian municipalities and retail customers. The stated fair value of these assets is determined on terms qualifying for level 2. Financial liabilities recognized at amortized cost and hedge accounting consist of debt securities issued and deposits. The stated fair value of these liabilities is determined by methods qualifying for level 2.

There have been no transfers between level 1 and level 2.

Note 6 Debt securities issued
